

PUTTING BUSINESS INFORMATION TO WORK WITHOUT PUTTING IT AT RISK

INFORMATION RISK ADVISORY SERVICE

Features

Four Phase Information Risk Advisory Service Assessment

- Business process and information handling analysis
- A Vulnerability Analysis, application of toolsets and a system scan
- Data information collection, correlation, interpretation and analysis
- Executive Security Assessment Report, Detailed Information Security Action Plan, Preliminary Remediation Implementation Roadmap.

The Information Risk Advisory Service incorporates RSA RiskAdvisor Service, robust data loss prevention program

Benefits

- Discover information loss vulnerabilities
- Identify compliance risk issues
- Document remediation information management policies
- Implement a security life-cycle management process

The same information that can help your business grow could become a liability if you lose control of it. Sensitive business information requires special handling. Does your sensitive information get the controlled access it needs? Are employees aware of the value of the information they handle? Is your proprietary information protected from any kind of loss? Are you keeping records in ways that meet regulatory compliance? Is there a corporate policy on who has access, who has control, and how information is classified? To protect enterprise information, yet use it to its full business advantage, let us help you bring it under control.

Identify the vulnerabilities and gaps in your protection

- Understand the power of information management policies to help you maximize the value of your business information through an Information Risk Advisory Services assessment
- Learn the industry and geo-political compliance requirements that affect your information, its access, use and storage
- Define the kinds of sensitive information you have and develop a security risk management strategy to best use and protect each type
- See how changes in policy can reduce risk and strengthen the security of your critical information

Develop an information management program to control your information

No checklist or software patch alone can secure your information. The solution is as unique as your technology and your organization. EDS, working with RSA, the security division of EMC, will consult with you on a risk advisory engagement then apply tools and expertise to help you develop a secure information management and risk mitigation program.

The assessment looks at your business process, current information management policies and your compliance environment. The implementation of your assessment can help mitigate the loss of sensitive information that is often routinely captured, generated, transmitted, copied and printed.

SECURITY AND PRIVACY SERVICES

Based on the findings of your assessment EDS and RSA are prepared to provide a comprehensive suite of security and privacy services.

To arrange for your assessment, please contact

RSA Security Inc.
174 Middlesex Turnpike
Bedford, MA 01730
phone: 1 800 495 1095
visit: rsa.com
e-mail: rsaglobalalliances@emc.com

EDS
5400 Legacy Drive
Plano, Texas 75024
phone: 1 800 566 9337
visit: eds.com
e-mail: info@eds.com

When the implementation is complete, you'll have control of your information management program with the knowledge to set policies to classify documents, to meet regulatory standards and avoid risks. The four-phased assessment will deliver:

- **An Executive Summary** with a high-level view of the data discovery results and an overview of the information control recommendations.
- **A Vulnerability Analysis** of your systems which identifies files containing targeted information and quantifies the incidents.
- **Recommendations and a Preliminary Remediation Implementation Roadmap** that proposes both detailed business processes and security recommendations to protect information throughout its lifecycle leading to compliance with regulatory requirements.

The goal is a secure information management structure

The most important reason to commission an assessment is to develop a secure Information Management structure. This will enable you to transform your information security posture from watching for threats and fearing loss to managing your sensitive regulated and non-regulated information and putting it to work.

EDS expertise helps organizations protect vital business information

Our proven approach, tools and methodologies provide tight protection to organizations world wide:

- We detect and quarantine 940,000 viruses annually
- We manage and monitor more than 2,500 firewalls and 3,000 intrusion-detection systems
- EDS quarantines 63 million spam messages monthly
- Each month, we prevent 550 million junk mail messages from ever reaching our employees' and our clients' e-mail environments

EDS was honored for "Overall Excellence in Security" at the 2008 Excellence in Security Awards during the Microsoft Chief Security Officer (CSO) Summit.

EDS and RSA, two leaders bringing you more control of your information

RSA, The Security Division of EMC, is the expert in information-centric security, enabling the protection of information throughout its lifecycle. As a part of the EDS Agility Alliance, RSA provides EDS customers a cost-effective way to secure critical information assets and online identities wherever they live and at every step of the way. RSA solutions enable you to manage security information and events to ease the burden of compliance. RSA offers a wide range of industry-leading solutions. Millions of users trust RSA with their identities, the transactions they perform and the data generated.
